List of Existing RPA/AI and Inflight Projects

#	Process	Description	Existing	Inflight
1	SSRS Web Link Fetching of AR Data from NAV for Premium Collections using SQL Server Reporting Services	Collections Agents use SSRS Web link to download weekly AR report from Microsoft Dynamics NAV in Premium Collections process	Yes	N/A
2	ARSS Web Link Fetching of AR data for Advances Collections	Collections Agents use ARSS Web Link to fetch AR data in Advances Collections process	Yes	N/A

To-Be Phase

To-Be Phase

Designing an improved process that addresses identified issues and meets stakeholder requirements

Objectives

Determine where AI accelerator & other transformation tools can enhance the overall process

Draft the "ideal" or “future state” version of the service, including AI, automations and reorganized workflows

Improve customer and operations experience

© 2025 Straive. All rights reserved | www.straive.com

Billing : To-Be Approach

- **Centralized Document Ingestion & Intelligent Triaging:** Billing agents will upload inbound PDFs from the Underwriting and Claims teams into a unified Billing Automation application. The system's core 3-Way Match Automation module will immediately ingest these files, extracting critical data and autonomously performing upfront triaging to verify signed conformances.
- **Automated Reconciliation & Legacy Integration:** For fully conformed documents, agents will trigger the 3-Way Match automation to seamlessly cross-reference and validate the extracted PDF data against active records in the legacy systems. Once validated, agents will utilize the Data Entry Module to accurately populate the foundational billing platforms (PBS, CPBS, ABS).
- **Multi-Tiered Governance & NAV Orchestration:** The workflow enforces strict data integrity via mandatory leadership validation gates. Upon receiving system notifications, the Billing Lead will review the 3-Way Match automation's results before pushing the validated data into Microsoft Dynamics NAV. The Lead will then utilize the 3-Way Match module a final time to verify the NAV synchronization prior to invoice generation.
- **Smart Invoice Distribution & Exception Routing:** Following NAV invoice generation, agents will swiftly dispatch the final billing documents to customers via email. Furthermore, if the 3-Way Match automation detects specific client handling requirements documented on the Intranet, the workflow will instantly prompt agents to notify the Delivery Team for hard-copy invoice distribution.

Collections : To-Be Approach

- **Unified Collections Hub:** Integrates seamlessly with Microsoft Dynamics NAV, legacy systems, and Outlook to orchestrate the entire collections lifecycle from a single centralized platform.
- **Automated AR Data Ingestion:** Eliminates manual data entry and spreadsheet maintenance by autonomously pulling Accounts Receivable data directly into the dashboard via existing SSRS and ARSS services.
- **Intelligent Dunning Module:** Automatically segments accounts based on days past due to dispatch personalized, bulk email reminders to customers and route proactive notifications to account officers.
- **Automated Response Analysis:** Leverages Microsoft Graph API to parse incoming customer emails, automatically identify payment commitments or structured plans, update system records, and flag them for specialist validation.
- **Meeting & Follow-Up Management:** Triggers automated reminders for face-to-face client meetings and analyzes agent-logged discussion notes to generate automated summaries and recommend next actionable steps.
- **Real-Time Analytics:** Provides comprehensive, real-time visibility and insights into overall collections performance directly through the dedicated dashboard interface.

Reconciliation : To-Be Approach

- **Centralized Data Aggregation:** The system automatically ingests and consolidates data from various external sources into a single unified dashboard, eliminating the need for manual data downloads and repetitive manual data entry across multiple Excel files.
- **Automated Data Processing (Macro Replacement):** The system natively executes the data formatting, structuring, and filtering logic that was previously handled by manual Excel macros, instantly presenting the agent with a standardized view of the data.
- **Intelligent Matching & Variance Suggestions:** The system analyzes the processed data to identify correlations and discrepancies. It provides the agent with actionable recommendations for matching tallied entries, highlights potential mismatches, and presents suggested variance calculations for review.
- **Agent-Led Validation & Decision:** The system acts strictly as an assistive tool. The agent reviews the system's findings and suggestions, validates or edits the proposed matches and variance calculations, and makes the final manual decision to proceed with the reconciliation.

Thank You

We leverage our unique people-process-tech framework to build the best-of-breed data analytics & AI solutions.
By operationalizing this solution into your core workflow, we deliver real-world measurable impact and better.
ROIs through a combination of higher efficiency, elevated experiences, and enhanced revenues.
